

PLASTEC TRI-TEC VALVE

The new Tri-Tec valve from Plastec is the simplest, quickest and most cost effective way to coordinate your hot and cold water connections underneath the kitchen sink. The Tri-Tec valve simply screws onto a standard 1/2 inch mains water inlet connection and once connected allows for both the kitchen sink mixer and dishwasher to be connected directly onto the valve. If there is no dishwasher to connect then simply leave this connection capped off for future use. The valve has an isolation handle which allows for easy maintenance of any fixtures connected to the valve.
