

# INFORMATION - PLASTEC EXPANDER JOINTS

Plastec manufactures a large range of flexible connections including Expander joints to accommodate thermal movement and also ground movement across all soil classifications as prescribed in AS2870 and Appendix G AS/NZS3500.2.

Our range expander joints are fully watermarked and tested to the highest standard. They are pressure tested at 85kpa which is the equivalent of 8 meters of head.

Unlike other types of expansion joints in the market place; all Plastec's expander joints include a positive stop, a requirement under WMTS 055. They can be installed horizontally, vertically and diagonally. An arrow identifies the preferred direction of flow, however Plastec will warrant the product fit for intended purpose if installed in the opposing direction.

These Expander Joints can also be used as a fixed pipe repair as an alternative to metal banded rubber couplings.

If you have any further questions or queries regarding our range of products, please contact Plastec.
